

Technical Planning

This is a website that delivers quality products at affordable prices with a smooth and trustworthy user experience. Here's the plan.

User-Friendly Features

Clean, interactive interface prioritizes easy navigation and smooth integration of all elements

Highly responsive design for maximum convenience on all devices

Essential pages

Homepage: Expecting the visitor with highlights.

Product Page: It can be a mix of various items.

Cart Page: Helps in managing the users' selections

About Page: The story and mission behind the platform

Product Detail Page: In-depth description and specifications about the product.

FAQ's Page: Solutions for common user queries

Contact Us Page: It provides the contact options to users

Checkout Page: It eases the process of payment.

Sign-Up Page: Helps to create and sign-in accounts.

Backend Management using Sanity CMS: Using Sanity, I will efficiently manage the content and ensure it's presented meaningfully.

Data Storage: Sanity will handle product data, customer details, order information, and payment methods.

Schema Creation: Thoughtfully designed schemas will enable streamlined management of products, orders, and user data.

Third-Party API Integration:

Payment APIs: Incorporating solutions like Stripe or quickpay to offer secure and reliable payment options.

Shipment APIs: Providing customers with the ability to track their orders in real-time, to instill confidence and make the shopping experience a better one.

This plan aims to create a robust, efficient, and customer-centric platform that stands out from the rest of the competitive marketplace.
